BOOK 2
code powers

How does your computer think? If you look deep inside...

It's made of billions of electric switches

These switches send messages to one another in a simple code

If a switch is on, that means 1. If it's off, that means 0.

These switches store words, numbers, and pictures in 0s and 1s – binary code

0	0	0	0	0	0
0	1	0	0	1	0
0	0	1	1	0	0
0	1	1	1	1	0
0	1	0	0	1	0
0	0	0	0	0	0

As electricity travels through the brain, special rules tell the switches when to turn off and on

So how do we change the rules, without writing out billions of 1s and 0s?

We use magic words that both humans and computers can understand:
programming languages

A program turns human words into 1s and 0s

print "Hello

World"

This is code. We use it to give our computer step-by-step instructions.

Your Kano speaks dozens of languages – Python to control Minecraft, JavaScript to build websites

Its code is open source. You can copy it, change it, and share it for free!

Kano OS is based on Linux - the most famous open-source project

Linux is an operating system, which connects a computer's codes together

Linux powers washing machines...

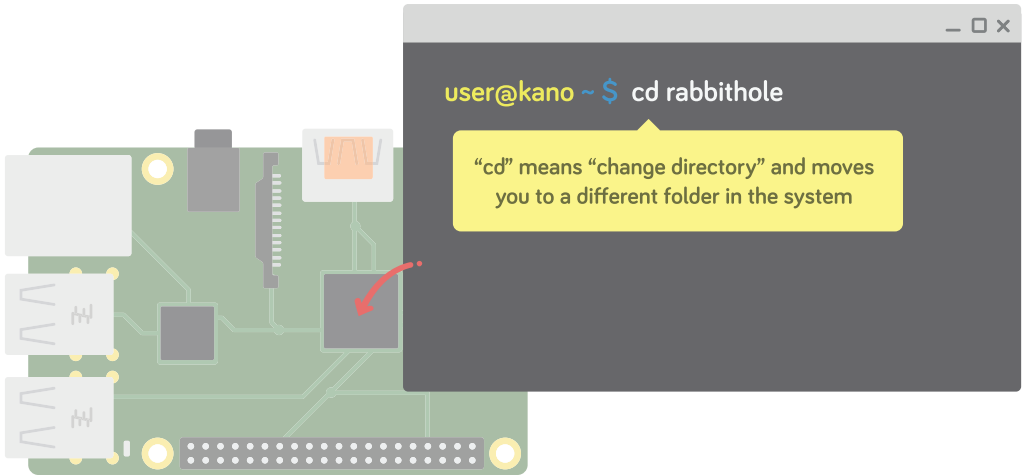

And even the International Space Station

Your computer can do incredible things, but don't forget...

It's just a big pile of switches that you can control with simple commands!

How? We have a tool that lets us talk directly to the brain

It's called the command line

You can find it from the Kano Desktop!

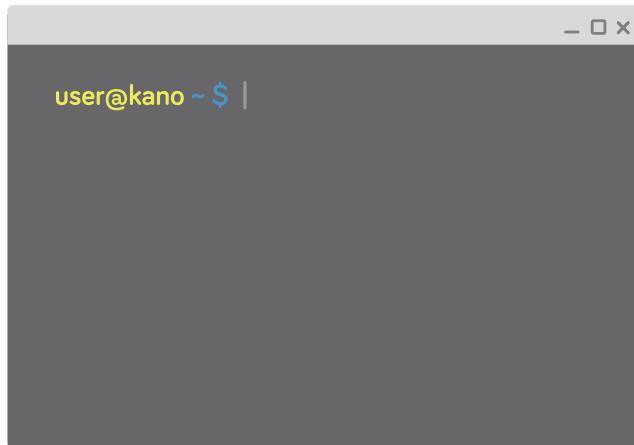

Click on Apps

Go to the Code tab and click on LX Terminal

This is the command line

With coded commands we can give your computer a voice

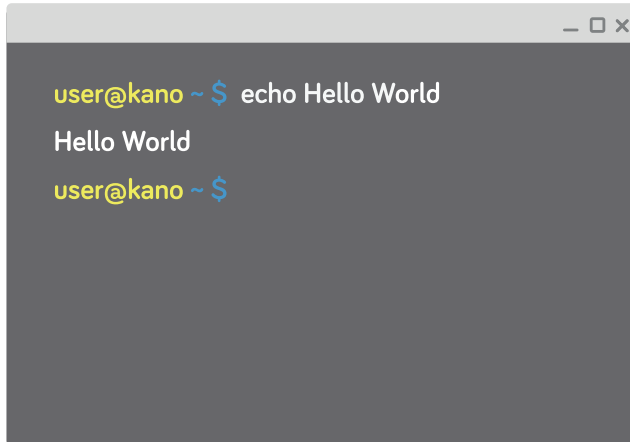

A terminal window with a dark gray background and a light gray title bar. The title bar contains three icons: a minus sign, a square, and an 'x'. Inside the terminal, the prompt 'user@kano ~ \$' is followed by the command 'echo Hello World'. A yellow callout box with a pointer to the command contains the text 'echo should be lower case'.

```
user@kano ~ $ echo Hello World
```

echo should be lower case

Type **echo Hello World** and press enter

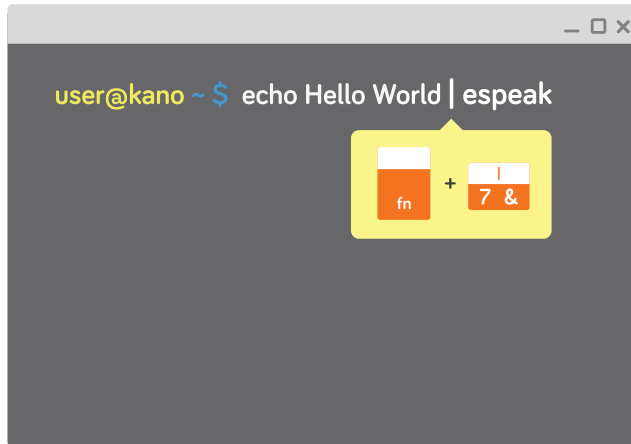

You just made the computer run a command!

A terminal window with a grey title bar containing standard window controls (minimize, maximize, close). The terminal has a dark grey background. It shows a prompt 'user@kano ~ \$' in yellow and blue, followed by the command 'echo Hello World' in white. The output 'Hello World' is displayed on the next line in white. The prompt 'user@kano ~ \$' appears again on the following line.

```
user@kano ~ $ echo Hello World
Hello World
user@kano ~ $
```

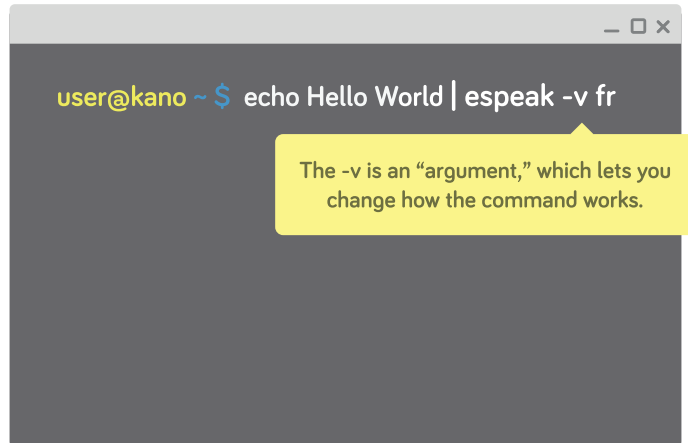

Let's try making it talk with the speaker

Try writing **echo Hello World | espeak**

The computer turned text into sound!
Both are types of data, 1s and 0s moving in the brain

We can make it say things in different voices too

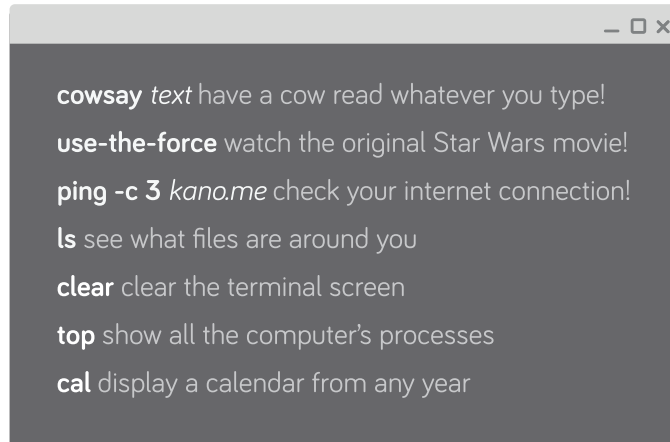

```
user@kano ~$ echo Hello World | espeak -v fr
```

The `-v` is an “argument,” which lets you change how the command works.

Try adding **-v fr** to make it speak with a French accent

The terminal is a place for wizards. Here are a few more magic spells to try:

When asked your password is **kano**

Go back to the desktop by clicking the cross in the upper-right corner

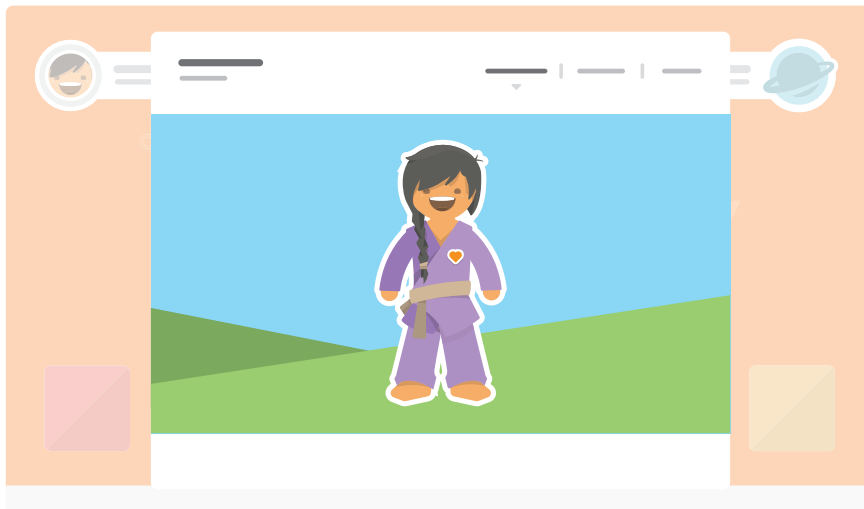

Or the Home button at the bottom

Now, let's talk about you

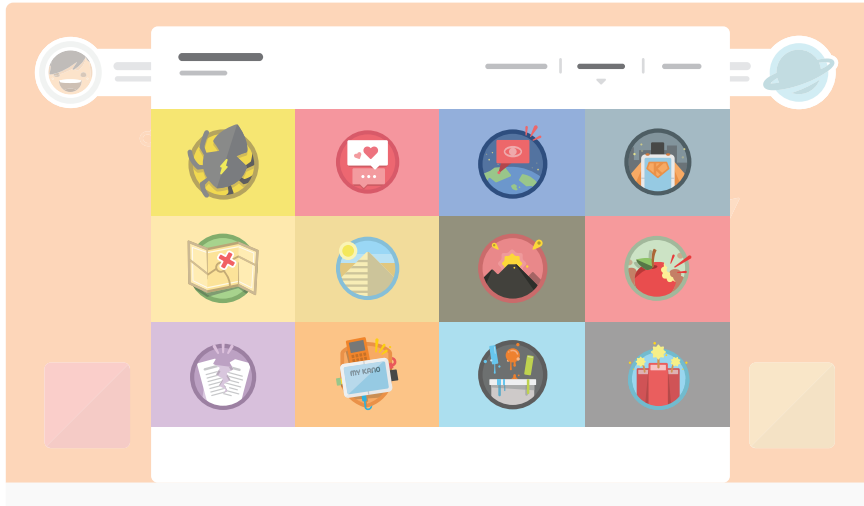

Click on your name in the top-left corner

In here you can customize your character and background

You can also check out your badges and saved creations

The more you play, the more you'll win!

Beat challenges to gain XP, unlock swag, and level up

Want to add new apps and share your creations?

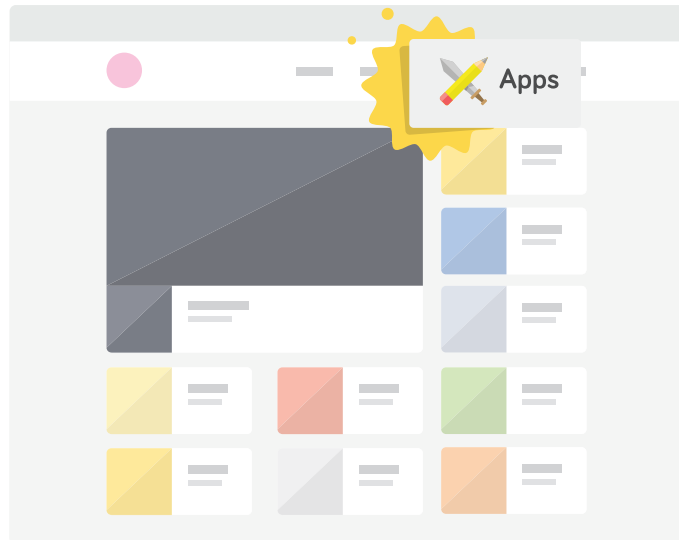

Click on Kano World

See how you stack up against Kano creators around the world

You can download new apps from Kano World too

The command line is great for coding games like Snake

Click the icon to try it out!

Use the arrow keys to move

Eat apples, but don't catch your tail!

Check out this amazing camoflauge snake game, made by **Zachary**

Go to getkano.co/zacharykano to try it!

Now let's try Pong

You can use blocks to change the rules

Press MAKE to play your game

Use the arrow keys to play

When you're ready to make Pong even cooler, press [esc]

Rescue your town from **RazorMaster**'s meteor strike!

Go to getkano.co/razormaster to try it!

Ready to code Minecraft?

Click the icon to get making

The top half of the screen is Minecraft - Creative Mode

In the bottom half, you'll use Kano Blocks to code the game yourself!

Make Minecraft has a secret...

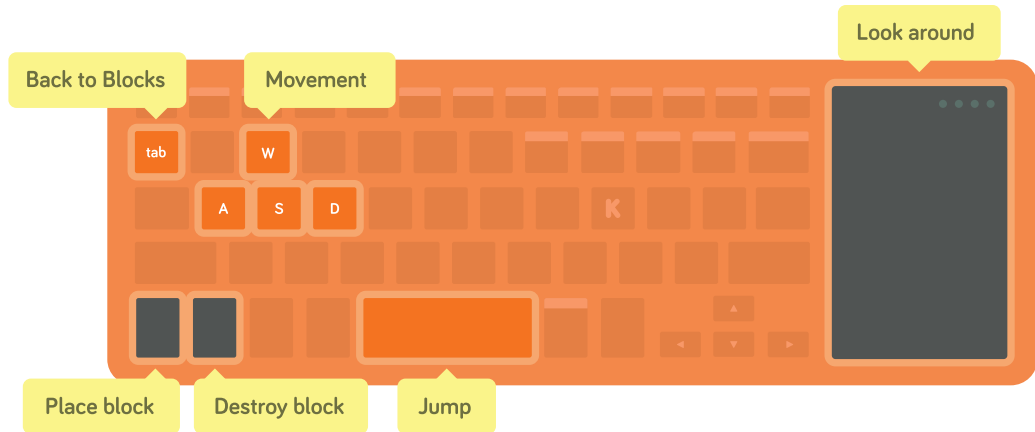

Click 'CODE' to see the python you've created

Check out **Burkeboy's frosty world** with diamond tunnels

Go to getkano.co/burkeboy to try it!

Use these controls to walk, jump, and fly. Click to place and destroy blocks

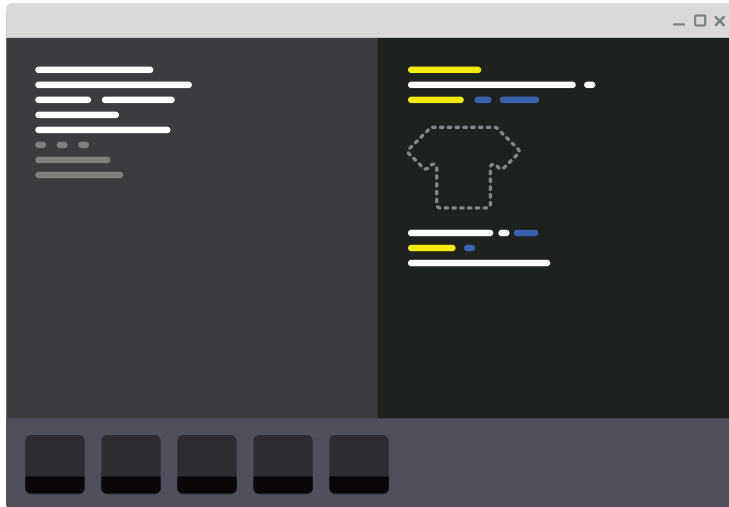

See what you can build!

Let's do Terminal Quest...

The left side tells the story...

...and the right side lets you play

Complete chapter one to get a badge!

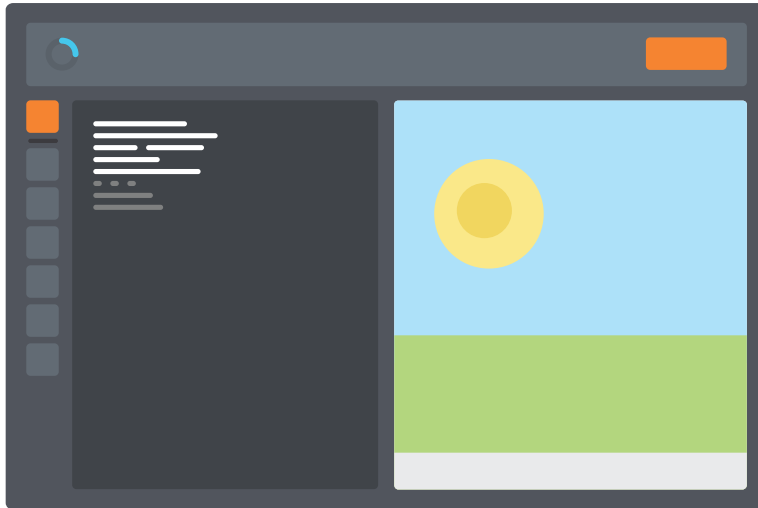

You're a Folderton Hero!

Let's try Make Art

The left side is where you write your code

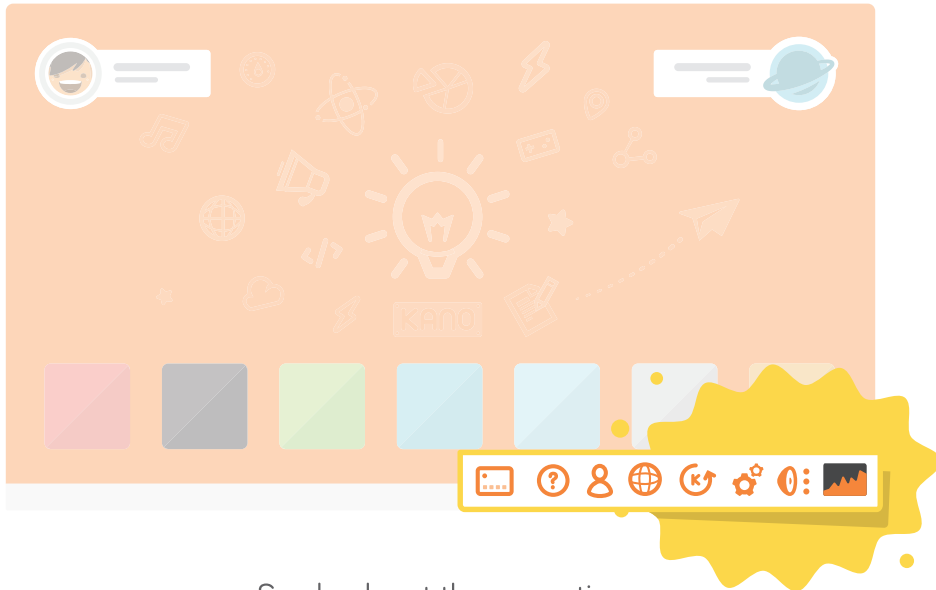

The right side shows your creation

Look at the beautiful art made by **awent0428**

Go to getkano.co/awent0428 to try it!

You're almost a Kano Master...

So check out these pro tips

Home Jump back to desktop

Help Give us a shout if you're stuck

Profile Log in, sync, backup, and restore your profile

Internet Status Check your connection

Kano Updater If it's orange, click to get new stuff!

Settings Change your setup

Volume Keep it bouncing

CPU Monitor If it's full, wait a few seconds

And remember to keep your Kano up to date

By clicking this icon when it turns full orange
